In re Application of:

Feussner et al.

Application No. Unassigned
(U.S. National Phase of PCT/EP00/06539)

Art Unit: Unassigned

Examiner: Unassigned

Filed: January 8, 2002

For: 11-ARACHIDONATE-LIPOXYGENASE
MUTANTS

PENDING CLAIMS AFTER ENTRY OF PRELIMINARY AMENDMENT

12. A method of enhancing the specificity of a plant lipoxygenase for position 11 of arachidonic acid comprising changing at least one amino acid in a wild type plant lipoxygenase, characterized in that the change takes place at position 576 of potato tuber lipoxygenase or at a corresponding position in a lipoxygenase of another plant species, whereupon the specificity of the plant lipoxygenase for position 11 of arachidonic acid is enhanced.

13. The method according to claim 12, characterized in that the change at position 576 results in the presence of a Phe residue at position 576.

14. The method according to claim 12, characterized in that the amino acid change is effected by directed mutagenesis.

15. The method according to claim 13, characterized in that the amino acid change is effected by directed mutagenesis.

16. An isolated or purified lipoxygenase obtainable by the method of claim 12.

17. An isolated or purified lipoxygenase obtainable by the method of claim 13.

18. An isolated or purified nucleic acid encoding the lipoxygenase of claim 16.

19. An isolated or purified nucleic acid encoding the lipoxygenase of claim 17.

In re Appln. of Feussner et al.
Application No. Unassigned (U.S. National Phase of PCT/EP00/06539)

20. An isolated or purified vector comprising the nucleic acid of claim 18.
21. An isolated or purified vector comprising the nucleic acid of claim 19.
22. A cell comprising the nucleic acid of claim 18 and/or a vector comprising said nucleic acid.
23. A cell comprising the nucleic acid of claim 19 and/or a vector comprising said nucleic acid.
24. A plant or a plant part comprising the cell of claim 22.
25. A plant or a plant part comprising the cell of claim 23.
26. A method for producing 11-perhydroxy arachidonic acid or the reduced 11-hydroxy derivative thereof comprising incubating arachidonic acid with the lipoxygenase of claim 16 under appropriate conditions, whereupon 11-perhydroxy arachidonic acid is obtained, and, optionally, reducing the 11-perhydroxy arachidonic acid, whereupon the reduced 11-hydroxy derivative thereof is obtained.
27. A method for producing 11-perhydroxy arachidonic acid or the reduced 11-hydroxy derivative thereof comprising incubating arachidonic acid with the lipoxygenase of claim 17 under appropriate conditions, whereupon 11-perhydroxy arachidonic acid is obtained, and, optionally, reducing the 11-perhydroxy arachidonic acid, whereupon the reduced 11-hydroxy derivative thereof is obtained.
28. An arachidonic acid derivative containing a hydroxy group at position 11.
